SUMMARY:

Aspiring DevOps Engineer with practical experience in CI/CD pipeline automation, Kubernetes orchestration, and cloud-native architectures. Proficient in Docker, Jenkins, ArgoCD, and AWS. Skilled in Infrastructure as Code (IaC) and monitoring tools, with a focus on optimizing deployment efficiency, scalability, system stability, and reliability.

TECHNICAL SKILLS:

- **DevOps Tools:** Docker, Kubernetes, Jenkins, ArgoCD, Helm, CI/CD Automation
- **Cloud:** AWS (EC2, S3, VPC – Basic Hands-on)
- **CI/CD:** Jenkins (Pipeline Automation)
- **Monitoring & Observability:** Prometheus, Grafana
- **Security (DevSecOps):** SonarQube, Trivy, OWASP Dependency Check
- **Infrastructure as Code (IaC):** Terraform (Multi-Environment, Hands-on)
- **Version Control:** Git, GitHub
- **Operating System:** Linux

PROJECT EXPERIENCE:

1. Helm-Based Kubernetes Application Release Management System:

(Helm, ArgoCD, Jenkins, Prometheus, Grafana)

- Developed reusable and production-ready Helm charts for deploying applications on Kubernetes
- Parameterized Kubernetes configurations using values.yaml for environment-specific deployments
- Automated Kubernetes application deployment, upgrades, and rollback processes using Helm
- Improved release management process and reduced configuration errors by 35%
- Ensured scalable and consistent Kubernetes deployments across multiple environments

🔗 GitHub: https://github.com/itsakrana/NotePad-Project.git

2. Secure CI/CD Pipeline with Integrated DevSecOps Practices:

(Jenkins, SonarQube, Trivy,OWASP, Docker)

- Designed and automated CI/CD pipelines for build, test, security scanning, and deployment workflows
- Implemented SonarQube Quality Gates to enforce code quality and ensure reliable releases
- Integrated Trivy and OWASP Dependency Check for automated vulnerability scanning
- Improved application security posture and reduced deployment failures by 25%
- Containerized and deployed applications using Docker for consistent and portable environments

🔗 GitHub: https://github.com/itsakrana/wanderlust.git

3. Production-Grade Terraform AWS Multi-Environment Infrastructure:

(Terraform, AWS, VPC, EC2, S3, DynamoDB, IAM, Security Groups)

- Built a production-grade Infrastructure as Code (IaC) solution using Terraform to provision and manage scalable AWS infrastructure across Dev and Prod environments
- Designed reusable Terraform modules for VPC, EC2, S3, DynamoDB, Security Groups, and Key Pairs for consistent deployments
- Implemented secure Dev and Prod environment isolation to ensure secure and isolated infrastructure for Dev and Prod
- Automated infrastructure provisioning and lifecycle management using Terraform automation workflows
- Improved deployment consistency and minimized manual infrastructure configuration effort

🔗 GitHub: https://github.com/itsakrana/Terraform-AWS-Multi-Env.git

4. Cloud-Native GitOps Observability Platform:
(ArgoCD, Kubernetes, Prometheus, Grafana)

- Implemented GitOps-driven deployment workflows using ArgoCD with automated synchronization and rollback capabilities
- Integrated Prometheus for Kubernetes cluster monitoring, metrics collection, and alerting
- Designed Grafana dashboards for real-time application performance and infrastructure observability, CPU/memory utilization, and system health
- Improved deployment consistency by 30% and minimized manual operational intervention
- Enabled real-time monitoring and faster incident detection across distributed microservices

🔗 GitHub: https://github.com/itsakrana/gitops-devops-dashboard.git

5. Automated CI/CD Pipeline for Microservices Deployment:
(Docker, Kubernetes, Jenkins)

- Designed and automated CI/CD pipelines for multi-service frontend and backend applications
- Automated source code integration, application build workflows, and Docker image creation
- Implemented automated Kubernetes deployments with rollout verification and deployment monitoring
- Enabled end-to-end deployment automation from code commit to production environments
- Reduced deployment time by 40% and improved application release efficiency

EDUCATION:

Bachelor of Science in Information Technology (B.Sc. IT) :
RD & SH National College, Mumbai
Expected Graduation: 2027|CGPA: 9.18/10

Higher Secondary Certificate (HSC) – Commerce :
RD & SH National College, Mumbai
Year of Completion: 2024|Percentage: 81.67%

Secondary School Certificate (SSC) :
St. Aloysius English High School, Mumbai
Year of Completion: 2022|Percentage: 83.80%

CERTIFICATION:

- **AWS Fundamentals** - Coursera | Credential URL: Link
- **DevOps Foundations** - LinkedIn Learning | Credential URL: Link
- **Getting Started with Kubernetes** - LinkedIn Learning | Credential URL: Link
